

Build Jenkins run

To create a report using mochawesome, we need this information to be in the cypress.json file.

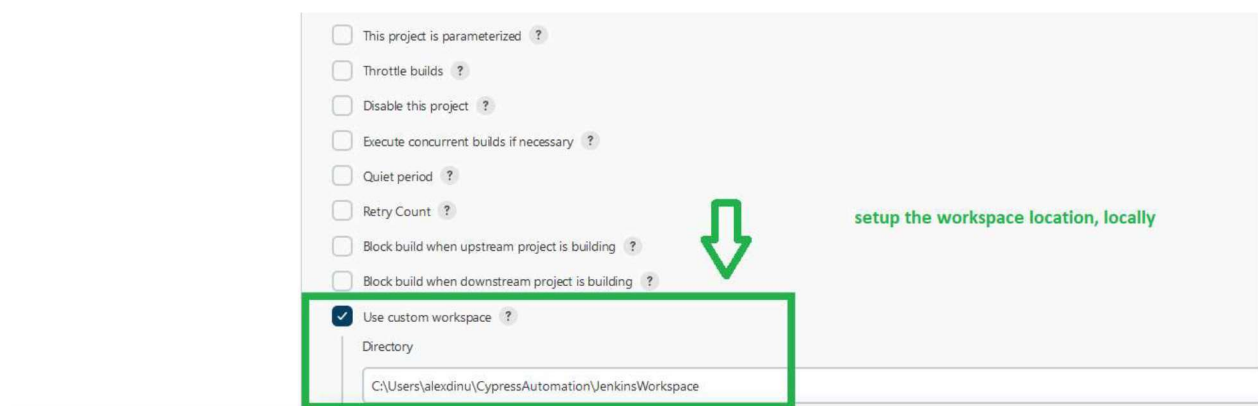

```
{
  "reporter": "mochawesome",
  "reporterOptions": {
    "charts": "true",
    "reportDir": "cypress/report/mochawesome-report",
    "overwrite": false,
    "html": false,
    "json": true
  }
}
```

If you don't have mocha installed, first we need to do it with these commands in cypress terminal (or cmd but being in cypress location)

1. Install Mocha:
npm install mocha --save-dev
2. Install cypress-multi-reporters:
npm install cypress-multi-reporters --save-dev
3. Install mochawesome:
npm install mochawesome --save-dev
4. Install mochawesome-merge:
npm install mochawesome-merge --save-dev
5. Install mochawesome-report-generator:
npm install mochawesome-report-generator --save-dev

Next, we need this information in the package.json file, which contains the commands to clean up the folders where the reports are saved at the beginning of each build run in Jenkins, in case the folders do not exist will be created and contains the commands to merge the reports from each test and then generate an html file after the merge is made.

```
"scripts": {
  "delete:reports": "del /f /s /q cypress\\report 1>nul",
  "remove:reports": "rd /s /q cypress\\report",
  "make:directories": "mkdir cypress\\report && mkdir cypress\\report\\mochawesome-report",
  "pretest": "npm run delete:reports || npm run clean:reports || npm run make:directories",
  "cypress": "node_modules\\.bin\\cypress run",
  "suite_tests": "npm run cypress --",
  "combine_reports": "mochawesome-merge cypress/report/mochawesome-report/*.json -o cypress/report/output.json",
  "generate_html": "marge cypress/report/output.json --reportDir ./ --inline",
  "posttest": "npm run combine_reports && npm run generate_html",
  "test": "npm run suite_tests || npm run posttest"
},
```

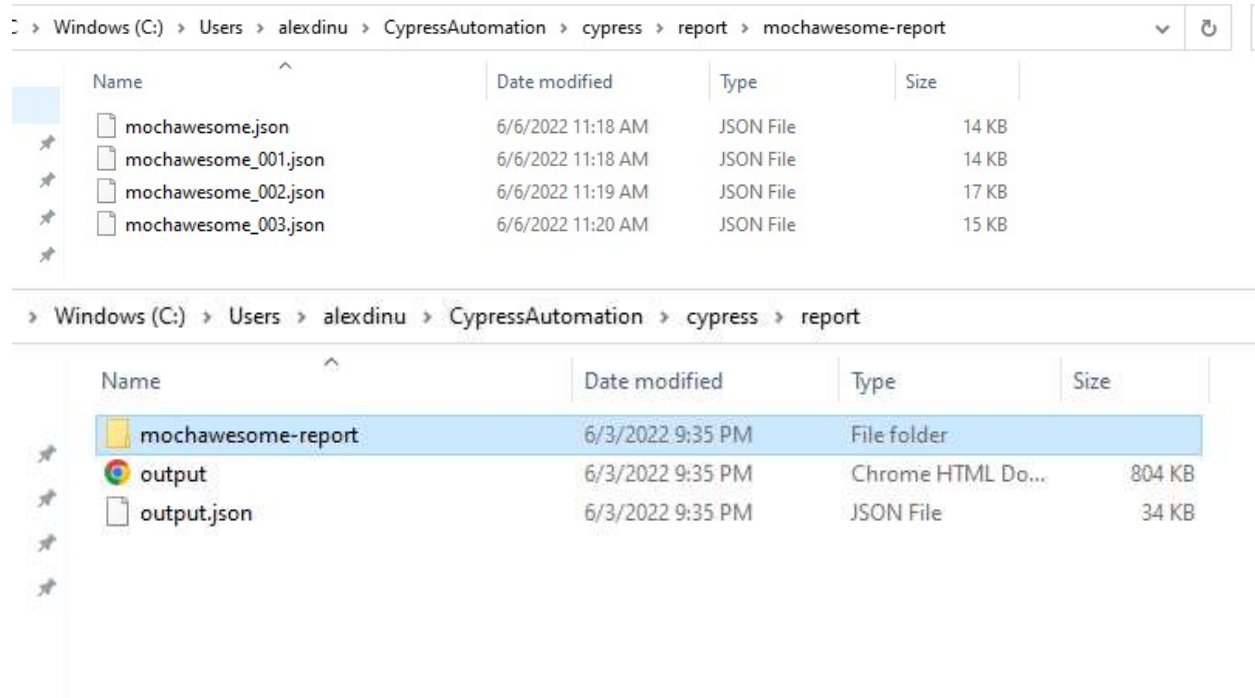

The image shows a Jenkins configuration page for workspace location. A green arrow points to the 'Use custom workspace' option, which is selected. The directory path 'C:\Users\alexdirin\CypressAutomation\JenkinsWorkspace' is entered in the text field below. To the right of the configuration, the text 'setup the workspace location, locally' is displayed in green.

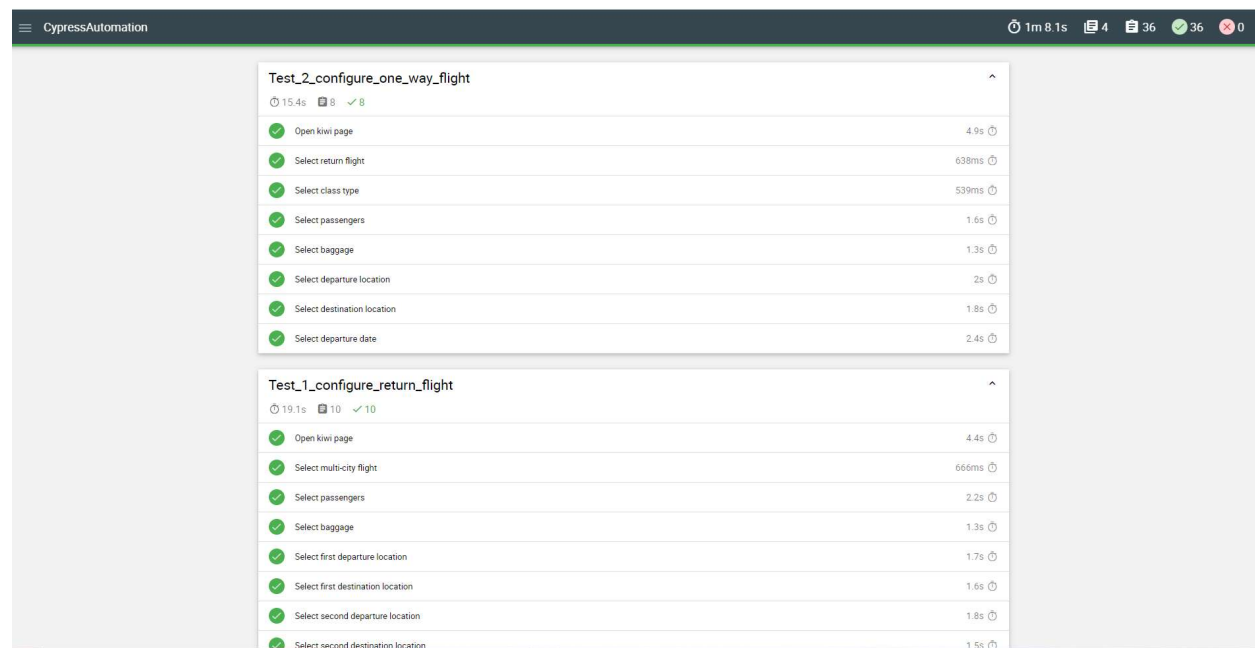

- ☐ This project is parameterized ?
- ☐ Throttle builds ?
- ☐ Disable this project ?
- ☐ Execute concurrent builds if necessary ?
- ☐ Quiet period ?
- ☐ Retry Count ?
- ☐ Block build when upstream project is building ?
- ☐ Block build when downstream project is building ?
- ☒ Use custom workspace ?
 - Directory
 - C:\Users\alexdirin\CypressAutomation\JenkinsWorkspace

setup the workspace location, locally

Mocha reports are successfully generated and merged into a single .json file.

And we have a beautiful report.
